The French have the name "Perce-Neige" for this earliest of spring heralds. Their persistency is noteworthy; they thrive in cool climates, are not fussy about being disturbed, and neglected shady places are exactly their paradise. Of them it is often said "Grandmother planted these." Ideal for rockeries.

PAPER-WHITE NARCISSUS. The best-known and most loved of all bulbous flowers for indoor culture. Our stocks are especially grown and selected for forcing in pots of pebbles, bulb fiber or soil. Plant in pots, and keep in a dark, cool place for two or three weeks; then gradually bring them to light and warmth. Never allow them to become overheated. A temperature of 50 to 55 degrees for the first few weeks, gradually increased to 70 to 75 degrees indoors for the next few weeks, is recommended. Allow them to cool off to about 60 degrees. 3 for 55c; 6 for \$1.05; 12 for \$1.90; 25 for \$3.50.

NARCISSI

The flowering season of Narcissi begins extremely early and lasts until quite late. As cut flowers they have few equals. Culture is the easiest possible. Plant in any good garden soil; cover to a depth of about twice the height of the bulb, measuring from the base to tip. Early planting is advisable; however, many fine flowers are produced from plantings made after the first of February. Narcissi multiply quite freely. Every three or four years they should be taken up during summer or early fall and replanted. Never remove green foliage from the bulbs.

No garden is too small for a few Daffodils.
